

Design by Initiative LLC, Product News – July 2011

- 2000 kW package (no big deal)
- 3000 gallon UL142 (no big deal...who is this guy)
- 70 dB(@ 1 mtr (this is bigger deal)
- No longer than 40 feet, no wider than 12 feet , (the deal gets bigger)
- Transport in one piece on one truck (max height 13' 6"), no assembly, exhaust rainflap aside, at site (huge deal)
- Large transportation and assembly savings (**OK so this is a big, and good, deal**)

From here we can talk about clean tidy package, walk in with 48 inches (NEC) clearance for rear facing breaker and controls and all of the issues and benefits we all appreciate so will talk no further; the photos below paint all the words.

The two packages have shipped and made it to its destination safe and sound.

How did we achieve the goal? Good airflow management, advanced acoustic splitter technology developed by **dB(i)** and dare we say some design by initiative, and a client that believed in our great team here at **dB(i)**.

Please contact us for any further info and to explore ways that we can help you win business
